DETAILED ACTION

1. The examiner acknowledges petition to revive the instant application has been received and granted as of June 16, 2006. The examiner acknowledges the amendment of June 16, 2005. Claims 1-11 have been canceled. Claims 12-23 are currently pending. Applicant's arguments regarding the rejection over claims 1-11 over the Douwens et al. references are persuasive. Accordingly, the rejection over Douwens et al. is withdrawn.

2. Action on the merits of claims 12-23 follows:

3. Claims 19 and 20 are objected to because of the following informalities: Claims 19 and 20 depend from canceled claim 1. Appropriate correction is required.

4. Claims 12, 22 and 23 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: the connection between the first tank, second tank, and third tank. Applicant should recite in the independent claims that the third tank is connected to a thermochemical reactor, which is connected to a heat exchanger, which is connected to a steam discharge outlet and an aircraft air conditioning system.

5. Claim 19 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. When drafting an apparatus claim applicant should avoid

Art Unit: 1764

recitations "intended to make it possible" and to positively claims the apparatus in element plus function or means plus function language. Suitable correction is required.

6. Claims 13-18, 20-21 is objected as being dependent upon a rejected base claim.

7. The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to teach and or suggest an air humidifying generator which humidifies in an aircraft or airplane air conditioning system by generating steam which includes at least one first tank containing a water based fluid, a second tank containing a first reagent a third tank containing a second reagent; a heat exchanger comprised of an envelope about the second tank, a steam discharge outlet an air conditioning system wherein the first reagent and second reagent are combined to create a reaction in the second tank which converts the water based fluid held in the envelope into steam which is thereafter released into the steam discharge outlet connected to the air conditioning.

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 1764

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
